## CARE & MAINTENANCE

---

Page 5

*Please note that all the instructions below are suggested methods of care and maintenance. We are not responsible for any damage incurred whilst cleaning. Always try a cleaning method on a hidden area first.*

### GLASS & MIRROR

For regular maintenance, the surface should be dusted with a soft dry cloth. Most blemishes can be removed using a dampened cloth and/or by the use of a quality brand glass cleaner.

### LACQUERED METAL FINISHES

For regular maintenance, dust lightly with a soft cloth. Most blemishes can be wiped off gently with a soft dampened cloth. Do not rub with abrasive materials or use detergents, solvents or metal polishes.

In the case of bad soiling, a very mild soap solution can be used with a soft cloth, but once the dirt has lifted, wipe off immediately. Care must be taken not to leave the surface wet for more than a few moments.

### UNLACQUERED METAL FINISHES

For regular maintenance, dust lightly with a soft dry cloth. Most blemishes can be wiped off gently with a soft dampened cloth. Do not scrub with abrasive materials or use detergents, solvents or metal polishes.

In the case of bad soiling, a very mild soap solution can be used, but once the dirt has lifted, wipe off immediately. Care must be taken not to leave the surface wet for more than a few moment.

Clear wax can be used to leave a protective coat and add a little shine. The only products to use are pure, clear furniture waxes by quality brands or their aerosol equivalents. It is important not to use waxes with added cleaning agents or turpentine. The wax should be applied sparingly with a soft cloth and wiped off quickly before it dries. Application will be easier if the wax is warm.
