Page 2

### FABRIC

5 metres of fabric required based on a plain material, COM (Includes self-piping if requested). A large pattern repeat may require more. If in doubt, please do get in touch.

Contrast covering can be ordered. A large pattern repeat may require more.

Fabric requirements, based on a horizontal or vertical repeat less than 37.5 cm:

- A. 3.5 m
- B. 2.5 m

### CONTRAST PIPING

1 metre of fabric required per chair, COM, for contrast piping and buttons.  
12 metres of ready-made piping cord or braid per chair, COM.

### FIRE RESISTANT INTER-LINER

We will happily provide an FR inter-liner should the material chosen not conform with UK Furniture and Furnishings Regulations. Please note that it is the client's responsibility to advise on the necessity for this when ordering.

---

## CASPAR ARMCHAIR

---

## CARE & MAINTENANCE

---

Page 12

*Please note that all the instructions below are suggested methods of care and maintenance. We are not responsible for any damage incurred whilst cleaning. Always try a cleaning method on a hidden area first.*

### UPHOLSTERY

We upholster all our seating using customer's own material/leather. Please refer to the care and maintenance instructions provided by the manufacturer.

### LEATHER

For leather supplied by us for use on furniture, for example the Hugo Drinks Cabinet, simply dust with a dry cloth.

Do not use use polish or cleaning products as these will affect the finish.

Blot spills with a soft dry cloth. Do not rub. If necessary use a slightly damp soft cloth taking care not to soak the leather. Do not rub and do not use abrasive materials. Allow to air dry.

There are many specialised leather cleaning companies available if required.

Avoid direct sunlight and high temperatures as this will compromise the finish.

### PU LACQUER FINISHES

For regular maintenance, dust lightly with a soft cloth following the timber's grain. Most blemishes can be wiped off gently with a soft dampened cloth, again following the timber's grain. Do not rub with abrasive materials or use detergents or solvents.

Do not use furniture wax and/or spray polishes as these will affect the finish.

Anything with a rough or abrasive underside, for example cups or plates, will scratch the finish, however slightly. Always use soft base coasters.

Avoid direct sunlight and high temperatures as this will compromise the finish.

---

## CARE & MAINTENANCE

---

Page 13

### PAINT LACQUER FINISHES

For regular maintenance, dust lightly with a soft cloth. Most blemishes can be wiped off gently with a soft dampened cloth. Do not rub with abrasive materials or use detergents or solvents.

Do not use furniture wax and/or spray polishes as these will affect the finish.

Anything with a rough or abrasive underside, for example cups or plates, will scratch the finish, however slightly. Always use soft base coasters.

Avoid direct sunlight and high temperatures as this will compromise the finish.

### FRENCH POLISH FINISHES

For regular maintenance, dust lightly with a soft dry cloth following the timber's grain. Do not use a dampened cloth. Wipe up any spillages quickly as liquids compromise French polish. Do not rub with abrasive materials or use detergents or solvents.

Clear wax can be used which will add a little shine. The only products to use are pure, clear furniture waxes by quality brands. It is important not to use waxes with cleaning agents or turpentine. The wax should be applied sparingly with a soft cloth following the timber's grain and wiped off quickly before it dries. Application will be easier if the wax is warm. Buff to shine using a clean dry soft cloth, again following the timber's grain.

Do not use spray polishes as these will affect the finish.

Anything with a rough or abrasive underside, for example cups or plates, will scratch the finish, however slightly. Always use soft base coasters.

Avoid direct sunlight and high temperature as this will compromise the finish.

### UNLACQUERED METAL LEGS

For regular maintenance, dust lightly with a soft dry cloth. Most blemishes can be wiped off gently with a soft dampened cloth. Do not scrub with abrasive materials or use detergents, solvents or metal polishes.

---

## CARE & MAINTENANCE

---

Page 14

In the case of bad soiling, a very mild soap solution can be used, but once the dirt has lifted, wipe off immediately. Care must be taken not to leave the surface wet for more than a few moments.

Clear wax can be used to leave a protective coat and add a little shine. The only products to use are pure, clear furniture waxes by quality brands or their aerosol equivalents. It is important not to use waxes with added cleaning agents or turpentine. The wax should be applied sparingly with a soft cloth and wiped off quickly before it dries. Application will be easier if the wax is warm.
